

GRIZZARDS

Player's Guide

Introduction

The land of Syrex is a dangerous place. Fierce monsters roam the countryside. But luckily for you, you're a Grizzard handler! Train your Grizzard to use a variety of moves to take on the monsters. Discover new kinds of Grizzards with new capabilities. Can you conquer all the monsters of Syrex?

In the *Grizzards* videogame, you'll roam the land looking for monsters. Monsters may surprise you as you travel, or you may see them coming. When faced with terrifying beasts, you'll direct your Grizzard to use its moves to defend you and attack the monsters.

This is the *Grizzards* No-Save Demo Player's Guide
Copyright © 2021-2022, Bruce-Robert Pocock

This version is for systems in US, Canada, Mexico, Brazil, and Japan using the NTSC television standard. For Atari Video Computer System CX-2600 (or Sears Tele-Games Video Arcade or Atari 7800 ProSystem) without AtariVox (or MemCard, or SaveKey) device.

This videogame software was not created, published, or licensed by Atari or its successors.

This manual describes a No-Save DEMO version of the game. The full version may be different.

1 Setting Up

To play *Grizzards*, you will need:

- An Atari console: the Atari Video Computer System CX-2600, Sears Tele-Games Video Arcade, Atari 2600jr game system, or Atari 7800 ProSystem
- A TV or video display
- A joystick controller (or SEGA Genesis/MegaDrive gamepad)
- The *Grizzards* game cartridge

Set up your console with your TV or video display. Connect a joystick controller (or SEGA Genesis/MegaDrive gamepad) to the *left* controller port.

Finally, insert the *Grizzards* game cartridge (with the label facing up) into the cartridge slot, and turn the Power On.

2 How To Play

2.1 Console Controls

Color/B&W Switch (Pause)

On an Atari 2600 (or Sears Arcade) you can pause the game using the **Color/B&W Switch**. Push the **Color/B&W** switch into the **Color** position to play, or the **B&W** position to pause the game.

On the Atari 7800, press the **Pause** button once to pause the game, and again to resume playing.

Game Select

When viewing the Title Screen, you can use the **Game Select** switch to begin your game or start over

While you are playing the game, you can use the **Game Select** switch to review your Grizzard's statistics from the Map screen, Combat screen, or a Grizzard Depot.

Game Reset

When viewing the Select Slot screen, press the **Game Reset** switch to begin playing the game.

While you are playing the game, press the **Game Reset** switch to abandon your progress and return to the Title Screen. You will lose any progress since the last time you visited a Grizzard Depot.

Difficulty Switches

You cannot delete a game in progress unless both Difficulty Switches are in the "A" (Advanced

or Expert) position. To protect your game from being deleted, set either one of the Difficulty Switches to the “B” (Beginner or Novice) position.

This game does not make use of the Difficulty Switches while you are playing.

2.2 Using a Gamepad

A SEGA Genesis/MegaDrive gamepad (or other compatible controller) may also be used with *Grizzards*. Use the **B** button as the **Fire** button. Use the **C** button as an alternative way to press the **Game Select** switch.

Your gamepad must be plugged in before you turn on the power if you want to use it. Otherwise, the **C** button will be ignored.

Press the **Game Select** switch or **Fire** button to move to the Start Game screen.

Press the joystick left or right to choose whether to **RESUME** your current game in progress or **BEGIN** a new game, then press **Game Reset** or the **Fire** button.

You'll begin in the ruins of Treble Village after the monsters invaded. You know that to the east are the extremely dangerous **Fire Bog**, so your best bet is to head west (left) and see if there are any other survivors.

2.3 Start a Game

Once your console is set up and everything is connected, turn on the Power switch. You'll see the title screen appear. If you have an AtariVox device, you'll also hear the title spoken.

2.4 Roaming The World

The World Map screen shows your current score (initially 000000) at the top of the screen. In the map display, you'll see the current area in which you are traveling. Guide yourself using the joystick controller.

To review your Grizzard's statistics, press the **Game Select** switch.

As you travel, you may encounter monsters, Grizzard Depots, other people, signposts, or doors. To interact with them, simply walk into them.

A monster, or group of monsters, look like this:

Sometimes these monsters may sneak up on you and attack! Other times you'll see them waiting for you and can avoid them — or walk up to them when you're ready to face them.

A Grizzard Depot looks like this:

In this no-save demo, you will have one Grizzard companion, Aquax. With a memory device, you may encounter other Grizzards that you can convince to join your party.

A door looks like this:

A signpost looks like this:

A person looks like this:

2.5 Grizzard Depots

To heal your current Grizzard partner, you'll need to find a Grizzard Depot.

Touch the Grizzard Depot on the map screen to enter it.

At a Grizzard Depot your Grizzard partner will be fully healed.

Here, you'll see the word **DEPOT**, your current Grizzard companion, and the number of hours you've been playing Grizzards (total, since you first started in this slot).

To review your Grizzard's statistics, press the **Game Select** switch or move the joystick left or right.

When you're ready to return to your adventure, press the **Fire** button.

2.6 Battling Monsters

Monsters plague the world of Syrex. If you're caught by monsters without a Grizzard partner, they're sure to eat you alive! Luckily your Grizzard partner will defend you from them, and monsters will attack it before you.

When you encounter monsters, you'll see the Combat display.

Monsters may travel in groups, so you may see more than one monster facing you.

The long bar beneath your Grizzard represents its health. If it is reduced to zero, your adventure will be over.

Using the joystick controller, you can choose from among the moves that your Grizzard knows how to perform. Press up and down to select a move. If your Grizzard knows how to perform a move, it will appear in color. If your Grizzard does not yet know how to perform a move, it will appear in black.

Most Moves will target one monster that you're facing. (Some Moves instead affect yourself.) Press left or right on the joystick controller to select a target if you're facing multiple monsters.

When you see the selection you want, press the **Fire** button. You must select a move that your

Select a Move

Select a Monster
to target

Use selected Move

Game Select

Show your Grizzard's stats

Grizzard knows how to perform.

To review the statistics of your Grizzard, press **Game Select**.

Executing a Move

It's possible for a move to miss its target. If that happens, you'll see **MISSED** appear briefly.

After a move has been executed, the creature targeted by that move may be injured (lose hit points) or have its statistics changed. Changes to statistics are temporary and last

Viewing your Grizzard's statistics

only the duration of one battle. After the battle, your Grizzard's statistics (or those of any monsters you failed to defeat) will return to normal.

If you Grizzard loses hit points, the bar below your Grizzard will reduce in length. When your Grizzard is nearly out of hit points, the bar will change to a red color to draw attention to that fact.

If your Grizzard is defeated, the monsters will surely eat you alive. Your adventure will end there, and you'll return to the title screen. You can resume your game from the Start Game screen, or start over.

The Combat screen

If you defeat all of the monsters, victory is yours! Your score will increase, and you'll return to the World Map screen victorious.

You may choose to run away from a fight, but the monsters will be immediately healed and may still come after you.

Grizzard Learning

Your Grizzard companion may learn from opposing Monsters. This can result in your Grizzard increasing its Attack or Defend score, or learning a Move that a monster has just performed.

Your Grizzard can only learn certain moves. Moves that your Grizzard might be able to perform, but does not yet know how to, will appear in black on the Combat display.

Statistics

You can also press the **Game Select** switch while viewing the Map, Combat, or a Grizzard Depot to review your Grizzard's statistics.

Once you've reviewed them, press the **Fire** button to return to the previous screen.

Each Grizzard companion has a few statistics:

ATK is the Grizzard's *attack* rating. This is the likelihood that your Grizzard will hit when it attacks a monster. Some Moves cause more damage than others, though.

DEF is the Grizzard's *defend* rating. This is how likely your Grizzard is to avoid being hurt by a monster's Move.

HP is the Grizzard's *hit points* or health. When monsters hit your Grizzard, this value will decrease. If it reaches zero, your game is over.

MAX is the Grizzard's *maximum hit points*. Your Grizzard can gain more hit points up to this amount.

Each of these statistics can be raised up to a maximum of 99 points. They may go up a bit after each monster that you defeat.

Your Grizzard may also be subject to one or more Status Effects. These will alter your Grizzard's status temporarily (only for the duration of one battle).

Status Effects

A move can affect its target with Status Effects. There are six possible Status Effects that can influence a creature:

SLEEP A creature which has gone to sleep can not move on their turn. There is a 50% chance of waking on each turn.

ATK UP A creature with Attack Up has its normal attack score doubled.

ATK DN A creature with Attack Down has its normal attack score halved.

DEF UP A creature with Defend Up has its normal defend score doubled.

DEF DN A creature with Defend Down has its normal defend score halved.

MUDDLE A creature which has been Muddled will choose its moves at random. There is a 50% chance of clearing its mind on each turn.

Scoring

When you defeat a monster, you'll earn points. The number of points you earn will increase as you defeat more difficult monsters.

Your score begins at 000000 when you start your adventure.

2.7 Game Over

If you fail in your mission, your game is over. However, you have another chance to continue.

When you continue, it'll be just as if you'd never failed in the first place. However, you'll start over from the beginning of the game, but with your current progress.

Just choose your game slot from the Title Screen to resume your adventure.

2.8 Winning the Campaign

You can't win the full campaign in this demo version. However, there is one quest that you can complete.

When you have completed that quest, a person in the game will let you know that you've reached the end of the demo. At that point, you can continue to level up your Grizzard by fighting more monsters, but you won't be able to make more progress in the story.

2.9 Starting Over

When you start the game, you can **BEGIN** a new game, or **RESUME** your existing game.

3 Grizzards and Moves

There are 30 Grizzards in the game world, each with their own unique starting attributes and sets of Moves.

In this demo, you can play with only Aquax. Other Grizzards are available with a memory device.

Each Grizzard is able to learn up to 8 different moves, in addition to the universal move **RUN AWAY**. It's up to you to discover which Moves each Grizzard is able to learn.

3.1 Aquax

Aquax is a brown Grizzard which lives in the swamps. It can learn these Moves:

- **SPLISH SPLASH** — splash water at the enemy, causing some damage.
- **RAISE HOPE** — may increase its own defend ability.
- **SURE SPLASH** — may increase its own attack ability.
- **QUICK FOOT** — causes some damage and may also decrease the enemy's defend ability.
- **GREAT MOJO** — causes some damage and may also decrease the enemy's attack ability.
- **FIRST AID** — heals a small amount of health, raising your own hit points.
- **SIMPLE CURE** — heals a bit larger amount of health.
- **COMMON CURE** — heals even more health.

3.2 Run Away

This Move lets you escape from a battle.

Your Grizzard will not be healed if you run away (unless you visit a Grizzard Depot); however, the monsters that you were facing will be healed immediately.

4 Monsters

Terrible monsters are arriving in Syrex, terrorizing the people. A few of them are described here.

Wicked Slime

These are weak slime monsters that your Grizzard can kill fairly easily ... but beware when they travel in large packs. Like many creatures, they know some healing Moves that might be useful to learn. Wicked Slimes are now found near Treble Village and the Lost Mine.

Horrid Slime

More dangerous than a Wicked Slime, a Horrid Slime may survive your attacks until you've learned some new moves.

Vorpall Bunny

A powerful monster that will take a few hits to kill, they're the only way for Aquax to learn Great Mojo. Beware their attack Moves, though! You may find Vorpall Bunnies near the Spiral Woods.

Rodents of Unusual Size

One of the dangers of the Fire Bog, but I don't think they really exist.

Flame Doggo

A danger of the Fire Bogs, these beasts roam in packs.

Will-O-Wisp

These bright, floating sparks are known to travel in large groups. Once your Attack score is high enough to hit them, they go down quickly.

5 Troubleshooting

5.1 Screen “Jitters,” freezes, or flashes blue

These may be signs that a screen (or the transition between screens) does not have the correct “scan line” count. This is a technical error by the game's developer (that's me!) and must be surecorrected in the next version of the game.

If you see these effects (or if you are running in Stella, if you notice that the scan line count is not 262 at all times) please report them to <mailto:support@star-hope.org> so that they can be corrected before the game is finished.

5.2 Sad Face Screen

If you see the Sad Face screen, the game is trying to tell you that there is a problem.

From here, you can press the **Game Reset** switch to return to the Title Screen.

White Sad Face Screen

The white sad face screen means that the game has encountered an error and cannot continue.

You should not be able to reach this screen. Please contact support@star-hope.org for additional assistance. Send the code number that appears on this screen with your email.

5.3 Pause button must be held down (7800)

This is believed to be a side effect of certain multi-carts, eg. PlusCart. If you are encountering this problem, please check <https://github.com/-brpocock/grizzards/issues/182> for current information.

Note that you can press **Game Select** to view your Grizzard's stats and effectively pause the game as well.

6 Technical Notes

The following notes are of interest to hackers only. You don't need to

understand anything in this section to play *Grizzards*.

6.1 Development Tools

The *Grizzards* source code and development tools are available from <https://Star-Hope.org/games/-Grizzards/> the *Grizzards* web site.

6.2 No-Save Version

This special No-Save demo does not allow you to save your progress or catch Grizzards, but it can be used without a memory device (such as SaveKey, MemCard, or AtariVox). When you turn off power to your console, all progress is erased.
